SN74LV4T125

SCLS749B –FEBRUARY 2014–REVISED SEPTEMBER 2014

SN74LV4T125 Single Power Supply Quadruple Buffer Translator GATE With 3-State Output CMOS Logic Level Shifter

1 Features

- Single-Supply Voltage Translator at 5.0-V, 3.3-V, 2.5-V, and 1.8-V V_{CC}
- Operating Range of 1.8 V to 5.5 V
- Up Translation
  - 1.2 V[(1)] to 1.8 V at 1.8-V V_{CC}
  - 1.5 V[(1)] to 2.5 V at 2.5-V V_{CC}
  - 1.8 V[(1)] to 3.3 V at 3.3-V V_{CC}
  - 3.3 V to 5.0 V at 5.0-V V_{CC}
- Down Translation
  - 3.3 V to 1.8 V at 1.8-V V_{CC}
  - 3.3 V to 2.5 V at 2.5-V V_{CC}
  - 5.0 V to 3.3 V at 3.3-V V_{CC}
- Logic Output is Referenced to V_{CC}
- Characterized up to 50 MHz at 3.3-V V_{CC}
- 5.5 V Tolerance on Input Pins
- –40°C to 125°C Operating Temperature Range
- Pb-Free Packages Available: SC-70 (RGY)
  - 3.5 × 3.5 × 1 mm
- Latch-Up Performance Exceeds 250 mA Per JESD 17
- ESD Performance Tested Per JESD 22
  - 2000-V Human-Body Model (A114-B, Class II)
  - 200-V Machine Model (A115-A)
  - 1000-V Charged-Device Model (C101)
- Supports Standard Logic Pinouts
- CMOS Output B Compatible with AUP125, LVC125

[(1)] Refer the V_{IH}/V_{IL} and output drive for lower V_{CC} condition.

2 Applications

- Tablet
- Smartphone
- Personal Computer
- Industrial Automotive

3 Description

SN74LV4T125 is a low-voltage CMOS buffer gate that operates at a wider voltage range for portable, telecom, industrial, and automotive applications. The output level is referenced to the supply voltage and is able to support 1.8-V, 2.5-V, 3.3-V, and 5-V CMOS levels.

The input is designed with a lower threshold circuit to match 1.8-V input logic at V_{CC} = 3.3 V and can be used in 1.8 V to 3.3 V level-up translation. In addition, the 5-V tolerant input pins enable down translation (for example, 3.3 V to 2.5 V output at V_{CC} = 2.5 V). The wide V_{CC} range of 1.8 V to 5.5 V allows the generation of desired output levels to connect to controllers or processors.

The SN74LV4T125 device is designed with current-drive capability of 8 mA to reduce line reflections, overshoot, and undershoot caused by high-drive outputs.

Device Information[(1)]

PART NUMBER	PACKAGE	BODY SIZE (NOM)
SN74LV4T125	TSSOP (14)	5.00 mm x 4.40 mm
	VQFN (14)	3.50 mm x 3.50 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)[1]

			MIN	MAX	UNIT
V_{CC}	Supply voltage range		−0.5	7.0	V
V_I	Input voltage range[2]		−0.5	7.0	V
V_O	Voltage range applied to any output in the high-impedance or power-off state[2]		−0.5	4.6	V
	Voltage range applied to any output in the high or low state[2]		−0.5	V_{CC} + 0.5	
I_{IK}	Input clamp current	$V_I < 0$		−20	mA
I_{OK}	Output clamp current	$V_O < 0$ or $V_O > V_{CC}$		±50	mA
I_O	Continuous output current			±35	mA
	Continuous current through V_{CC} or GND			±70	mA

(1)　Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2)　The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.

7.2 Handling Ratings

			MIN	MAX	UNIT
T_{stg}	Storage temperature range		−65	150	°C
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins[1]	0	2	kV
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins[2]	0	1	

(1)　JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2)　JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)[1]

			MIN	MAX	UNIT
V_{CC}	Supply voltage		1.6	5.5	V
V_I	Input voltage		0	5.5	V
V_O	Output voltage	High or Low State	0	V_{CC}	V
		H-Z	0	V_{CC}	V
I_{OH}	High-level output current	V_{CC} = 1.8 V		–3	mA
		V_{CC} = 2.5 V		–5	
		V_{CC} = 3.3 V		–8	
		V_{CC} = 5.0 V		–16	
I_{OL}	Low-level output current	V_{CC} = 1.8 V		3	mA
		V_{CC} = 2.5 V		5	
		V_{CC} = 3.3 V		8	
		V_{CC} = 5.0 V		16	
$\Delta t/\Delta v$	Input transition rise or fall rate	V_{CC} = 1.6 V to 2.0 V		20	ns/V
		V_{CC} = 2.3 V to 2.7 V		20	
		V_{CC} = 3 V or 3.6 V		20	
		V_{CC} = 4.5 V to 5.0 V		20	
T_A	Operating free-air temperature		–40	125	°C

(1) All unused inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.

7.4 Thermal Information

t_{PLH}/t_{PHL}	Open
t_{PLZ}/t_{PZL}	V_{CC}
t_{PHZ}/t_{PZH}	GND
Open Drain	V_{CC}

VOLTAGE WAVEFORMS PULSE DURATION

VOLTAGE WAVEFORMS SETUP AND HOLD TIMES

VOLTAGE WAVEFORMS PROPAGATION DELAY TIMES INVERTING AND NONINVERTING OUTPUTS

VOLTAGE WAVEFORMS ENABLE AND DISABLE TIMES LOW- AND HIGH-LEVEL ENABLING

NOTES: A. C_L includes probe and jig capacitance.
B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
C. All input pulses are supplied by generators having the following characteristics: PRR ≤ 1 MHz, Z_O = 50 Ω, t_r ≤ 3 ns, t_f ≤ 3 ns.
D. The outputs are measured one at a time, with one input transition per measurement.
E. All parameters and waveforms are not applicable to all devices.

Figure 2. Load Circuit and Voltage Waveforms

9 Detailed Description

9.1 Overview

The SN74LVxTxx family was created to allow up- or down-voltage translation with only one power rail. The family has over-voltage tolerant inputs that allow down translation from up to 5.5 V to the V_{CC} level that can be as low as 1.8 V. The family SN74LVxTxx also has a lowered switching threshold that allows it to translate up to the V_{CC} level that can be as high as 5.5 V.

9.1.1 Translating Down

Using these parts to translate down is very simple. Because the inputs are tolerant to 5.5 V at any valid V_{CC}, they can be used to down translate. The input can be any level above V_{CC} up to 5.5 V and the output will equal the V_{CC} level, which can be as low as 1.8 V. One important advantage to down translating using this part is that the I_{CC} current will remain less than or equal to the specified value.

Down translation possibilities with SN74LVxTxx:

- With 1.8-V V_{CC} from 2.5 V, 3.3 V, or 5 V down to 1.8 V.
- With 2.5-V V_{CC} from 3.3 V or 5 V down to 2.5 V.
- With 3.3-V V_{CC} from 5 V down to 3.3 V.

9.1.2 Translating Up

Using the SN74LVxTxx family to translate up is very simple. The input switching threshold is lowered so the high level of the input voltage can be much lower than a typical CMOS V_{IH}. For instance, If the V_{CC} is 3.3 V then the typical CMOS switching threshold would be V_{CC} / 2 or 1.65 V. This means the input high level must be at least V_{CC} × 0.7 or 2.31 V. On the LVxT devices the input threshold for 3.3-V V_{CC} is approximately 1 V. This allows a signal with a 1.8-V V_{IH} to be translated up to the V_{CC} level of 3.3 V.

Up translation possibilities with SN74LVxTxx:

- With 2.5-V V_{CC} from 1.8 V to 2.5 V.
- With 3.3-V V_{CC} from 1.8 V or 2.5 V to 3.3 V.
- With 5-V V_{CC} From 2.5 V or 3.3 V to 5 V.

9.2 Functional Block Diagram
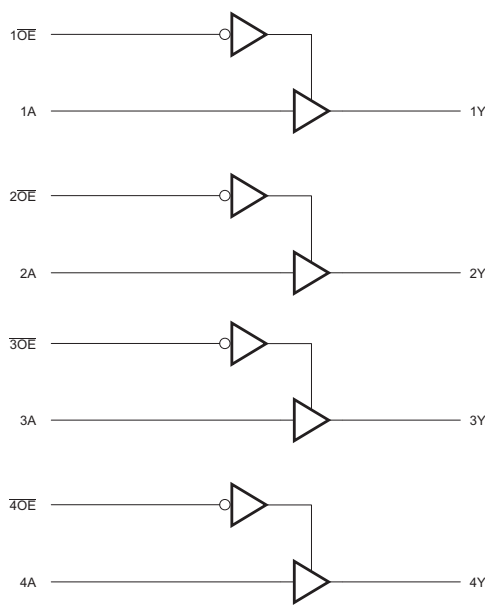

9.3 Feature Description

This part is a single supply buffer that is capable up or down translation. The output will equal V_{CC} while the input can vary from 1.2 V to 5.5 V.

Up Translation Mode:
- 1.2 V to 1.8 V at 1.8-V V_{CC}
- 1.5 V to 2.5 V at 2.5-V V_{CC}
- 1.8 V to 3.3 V at 3.3-V V_{CC}
- 3.3 V to 5.0 V at 5.0-V V_{CC}

Down Translation Mode:
- 3.3 V to 1.8 V at 1.8-V V_{CC}
- 3.3 V to 2.5 V at 2.5-V V_{CC}
- 5.0 V to 3.3 V at 3.3-V V_{CC}

9.4 Device Functional Modes

This device performs the function of a buffer where input logic level equals the output logic level, while providing buffering and drive to the output. The SN74LV4T125 device will also translate voltages up or down while performing this function.

Table 1. Function Table
(Each Buffer)

INPUTS		OUTPUT
$\overline{OE}$	A	Y
L	H	H
L	L	L
H	X	Z

Table 2. Supply V_{CC} = 3.3 V

INPUT b (Lower Level Input)		OUTPUT (V_{CC} CMOS)
A	B	Y
V_{IH}(min) = 1.35 V		V_{OH}(min) = 2.9 V
V_{IL}(max) = 0.8 V		V_{OL}(max) = 0.2 V

10 Applications and Implementation

> **NOTE**
>
> Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

10.1 Application Information

Based upon the lower-threshold circuit design of the LVxT family, the LVxT family also supports level translation. For level translation up and down, the LVxT family requires only a single power supply.

Standard Logic Mode 1.8V, 3.3V
10.2 Typical Application
Figure 3. Switching Thresholds for 1.8 V to 3.3 V Translation

Typical Application (continued)

10.2.1 Design Requirements

This device uses CMOS technology and has balanced output drive. The input threshold levels are lowered to allow for up translation. At 5 V the device has equivalent TTL input levels.

10.2.2 Detailed Design Procedure

1. Recommended input conditions:
   – Rise time and fall time specifications. See ($\Delta t/\Delta V$) in *Recommended Operating Conditions* table.
   – Specified high and low levels. See (V_{IH} and V_{IL}) in *Recommended Operating Conditions* table.
   – Inputs are overvoltage tolerant allowing them to go as high as 5.5 V at any valid V_{CC}.
2. Recommend output conditions:
   – Load currents should not exceed 35 mA per output and 70 mA total for the part.
   – Outputs should not be pulled above V_{CC}.

10.2.3 Application Curves

Figure 4. Switching Characteristics at 50 MHz
Excellent Signal Integrity (3.3 V to 3.3 V at 3.3-V V_{CC})

Figure 5. Switching Characteristics at 15 MHz
Excellent Signal Integrity (3.3 V to 1.8 V at 1.8-V V_{CC})
11 Power Supply Recommendations

The power supply can be any voltage between the Min and Max supply voltage rating located in the *Recommended Operating Conditions*.

Each V_{CC} pin should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, 0.1 µF is recommended. If there are multiple V_{CC} pins, then 0.01 µF or 0.022 µF is recommended for each power pin. It is acceptable to parallel multiple bypass caps to reject different frequencies of noise. A 0.1 µF and 1 µF are commonly used in parallel. The bypass capacitor should be installed as close to the power pin as possible for best results.

12 Layout

12.1 Layout Guidelines

When using multiple bit logic devices inputs should not ever float.

In many cases, functions or parts of functions of digital logic devices are unused, for example, when only two inputs of a triple-input AND gate are used or only 3 of the 4 buffer gates are used. Such input pins should not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. Specified in Figure 6 are the rules that must be observed under all circumstances.

All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that should be applied to any particular unused input depends on the function of the device. Generally they will be tied to GND or V_{CC} whichever make more sense or is more convenient.

It is generally acceptable to float outputs unless the part is a transceiver. If the transceiver has an output enable pin it will disable the outputs section of the part when asserted. This will not disable the input section of the IOs so they also cannot float when disabled.

12.2 Layout Example

13.2 Trademarks

All trademarks are the property of their respective owners.

13.3 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

13.4 Glossary

SLYZ022 — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

14 Mechanical, Packaging, and Orderable Information

The following pages include mechanical packaging and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
SN74LV4T125PWR	ACTIVE	TSSOP	PW	14	2000	Green (RoHS & no Sb/Br)	CU SN	Level-1-260C-UNLIM	-40 to 125	LV4T125	Samples
SN74LV4T125RGYR	ACTIVE	VQFN	RGY	14	3000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR	-40 to 125	LVT125	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

          B.   This drawing is subject to change without notice.
          C.   QFN (Quad Flatpack No−Lead) package configuration.
          D.   The package thermal pad must be soldered to the board for thermal and mechanical performance.
          E.   See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
        F.   Pin 1 identifiers are located on both top and bottom of the package and within the zone indicated.
             The Pin 1 identifiers are either a molded, marked, or metal feature.
          G.   Package complies to JEDEC MO−241 variation BA.

RGY (S−PVQFN−N14)   PLASTIC QUAD FLATPACK NO−LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No−Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.
